

FastSIGN Cloud

- Instant e-signature
- Tamper-proof, logs IP and timestamp

FastSIGN Cloud

FastSIGN Cloud enables electronic signatures and digital transmission of all documents across platforms, without distance restrictions. Remote work efficiency is maintained with zero-contact. Common business documents like quotations, contracts, offer letters, attendance sheets, and surveys are all supported. Compliant with e-signature laws, FastSIGN Cloud provides high-level security protection for every approval step, ensuring data security beyond what paper documents can offer.

Instant online signing helps to speed up document approvals.

- Quickly identify signature fields and create digital documents.
- Use electronic signature questionnaires for simultaneous signing.
- Create custom stamps; suitable for small and large seals.

Flexible sharing allows signing from anywhere.

- Send document links via email or Line for signing.
- Customize signing order; the system notifies signers in sequence.
- Scan QR code to sign; mobile devices serve as portable signature pads.

Document encryption and multi-factor identity verification.

- AATL recognized, online verification to prevent document tampering.
- Encrypts signing time, IP, and dynamic signature trails.
- Protect documents with password or access code to open signature pages.

Complete API integration. Pro Version

- Enhanced account login security with OTP multi-factor authentication.
- Integrate with internal AD accounts for unified user verification.
- Define user permission levels for effective account management.
